

During my time as an Associate Quality Assurance Engineer at Clarivate, I worked extensively with data validation, API testing, automation, and defect analysis. My role required careful verification of application outputs, identifying inconsistencies, and collaborating with development teams to ensure data accuracy and software reliability. These experiences strengthened my analytical thinking, attention to detail, and ability to work with complex datasets in a structured manner.

My academic studies have further developed my skills in Python, SQL, data analysis, and machine learning. Through coursework and projects, I have worked with data preprocessing, visualization, and analysis while learning how to transform raw data into meaningful insights. I also have experience documenting technical processes clearly, which I understand is essential for successful consulting engagements.
